## Alternators

# The Milspec Alternator

The Milspec alternators were originally designed in the 1980's to meet the joint requirements of the Australian, British, Canadian and US Defence Forces.

Milspec currently produce high reliability alternators with the following output:

- 28 Volt, 100 Amp induction alternator
- 28 Volt, 160 Amp induction alternator
- 28 Volt, 300 Amp induction alternator

These alternators have recently seen service in the harsh environment of the Middle East and Australia as well as the colder climates of Europe and the tropical climates of SE Asia.

We offer the alternators for a range of applications including the following examples:

- Military vehicle manufacturers/repairers. For example, the successful Australian made Bushmaster is equipped with a Milspec alternator in both the Australian and UK variants.
- Large vehicle manufacturers (trucks, buses, agricultural and mining machines).
- Auto electrical wholesalers/repairers.
- Earthmoving equipment.
- Special purpose equipment requiring low voltage/high current supply.
